

LIVELABS

EFFORTLESS VIRTUAL TRAINING ENVIRONMENTS

Enhance your training value with LiveLabs

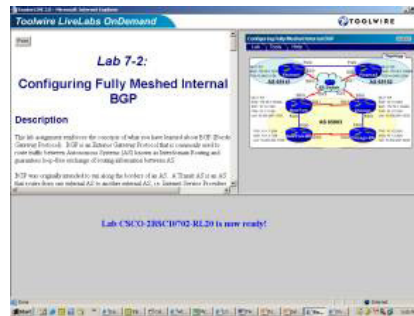

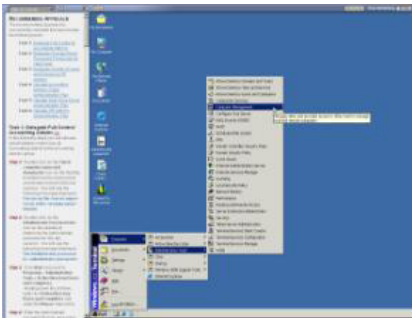

LiveLabs is a hosted training solution that allows students to build their skills through experiential learning. Experiential learning addresses the ever-pressing need to maintain current and relevant skills by helping students retain knowledge better through immediate hands-on exercises and immediate utilization. LiveLabs is the proven on-demand workforce development and productivity tool for IT professionals.

Why use LiveLabs?

Whether securing a network, migrating to Windows Vista, or designing an IT plan, hands-on experience plays a key role in successfully running mission critical infrastructure. Students use real software and real networking environments, all conveniently hosted via the internet.

ADNET and Toolwire's LiveLabs solutions bridge the gap between education and experience, and provide experiential learning solutions for classrooms and e-Learning training programs. Unlike stand-alone training methods, LiveLabs extends classroom and textbook knowledge through the use of online content and hands-on practice, including lab capabilities around core IT areas such as Microsoft and Cisco and tailored, client-specific requirements and applications.

LiveLabs offers students rapid, unscheduled access to real IT environments and intuitive exercises in a learner-friendly interface.

Learn without the risk

LiveLabs provide students with “On-Demand”, live, practical, hands-on experience with production-level technology - without having to own the equipment! LiveLabs offers students the following benefits:

- **On-demand training**
Get hands-on experience, 24/7, without having to own the equipment or risk damage to your own systems.
- **Real-world examples**
Transfer course concepts into real-world scenarios and develop your own custom solutions.
- **User-guided training**
LiveLabs is not a simulation, and allows students to learn in real environments, using real technology.
- **Increased retention**
LiveLabs allows students to learn by doing, which enables them to retain knowledge learned in the classroom.
