## FUNDAMENTALS & CERTIFICATION

### PREPARATION COURSE

## Student Testimonials

“Darwyn was extremely knowledgeable about the subject matter and very good at getting everyone in the class involved. His focus on getting the class to work in teams was an extremely effective tool in helping us use the processes, not just memorize them. A 13-week course sounds like a lot, but it was actually just enough time to cover the material and give the class time to absorb and master it. I would highly recommend this certification course to anyone looking to either gain knowledge about PMP or who wants to get their certification. Just studying this material from a book would not have provided as an effective learning method or environment as taking the class from such a knowledgeable instructor and with others.”

- Nancy L. Barrett, CT Dept Public Health , PHIN Coordinator

“...Darwyn was extremely helpful both in and outside of class to help me not only cover the material but also to prepare my application (no small task when you have to document 4,500 hours of PM experience). His business experience, knowledge base, and general enthusiasm for the profession made a tremendous contribution to the class.”

- Martha Warren Mitchell, Senior Project Director, Assessment Solutions Group

“The ADNET PM course was a great overview to PM and was essential to passing the PMI Exam, which I did 5 weeks after completing the class. The class was well laid out with a good mix of classroom instruction, review of the reading, quizzes, group project work and group presentation. The class size of 12 was ideal because it wasn't too big, but there were enough people that provided real-world experience relating to class topics.”

- John Bolduc, Senior Systems Specialist

## Meet Your Instructor

*Darwyn Azzinaro, certified PMP and OMP3, is your instructor for both the introductory seminar and the course series. Darwyn has been a Project Management Institute member since 1997 and has an extensive background of Project Management and instruction.*
