

# Antispam

## Hosted Spam Solution

**Antispam, ADNET's new hosted spam solution combats the increasing threat spam poses to your business by automatically quarantining potentially dangerous emails and viruses, before they reach your network.**

### What is Antispam?

Antispam is a hosted spam solution designed to protect your business from harmful and annoying spam messages, and prevent viruses from infiltrating your network. Today, it is estimated that at least 75% of all email is spam (Source: Symantec). Antispam enables you to focus on your critical communication needs instead of wasting time filtering spam.

### How is Antispam unique?

Antispam has an extremely high spam detection rate, along with a very low "false positive" rate, meaning you'll never have to waste your time sifting through potentially harmful emails to get to the messages you need. Even quarantined messages are easily managed, ensuring that valuable emails, in the rare case of being mislabeled as spam, are not lost. Antispam's numerous advantages over software and appliance-based solutions make it the best choice in spam detection services.

### How can Antispam lower my IT costs?

Spam is far more than an annoyance - it's a direct hit to your business. The average business user is now spending 16 seconds identifying and deleting each spam email (Source: Nucleus Research). At an average cost of \$712 yearly in lost productivity, this translates into an annual cost of \$70 billion to all U.S. businesses. Antispam also protects your network from harmful viruses delivered via email that can lead to costly downtime.

### What are the benefits?

Antispam is a reliable and affordable spam solution that includes the following features and benefits:

- **Very high spam detection rate**  
The combination of a very high spam detection rate and the significant decrease in the number of emails you'll receive will lead to a noticeable increase in bandwidth.
- **Easy quarantine management**  
Users can easily manage their own quarantined emails, eliminating the need for an administrator.
- **Virus protection**  
Viruses are filtered offsite, preventing them from infiltrating your network and causing downtime or data loss.
- **Lower long-term support costs**  
No hardware purchases or upgrades are necessary.
