

DesktopCare

Desktop Monitoring Solution

DesktopCare, ADNET's desktop monitoring solution, is a crucial component of professional IT services, extending the same level of protection to your desktops as ServerCare brings to your infrastructure.

Why DesktopCare?

Even if your servers are patched and maintained, it can be difficult to extend that same level of protection down to your desktops. Many businesses don't budget for preventative maintenance for their desktops, even though in typical environments, desktops outnumber servers by a ratio of 10:1. It only takes one virus to take down an unprotected PC, leading to data loss that could have harmful impact to your organization, and hours of costly labor associated with rebuilding the affected PC.

How is DesktopCare unique?

DesktopCare protects your desktops just as ServerCare protects your infrastructure. The included antivirus and antispyware software offer constant protection to your users, while periodic Internet and temporary file cleanup helps to keep their systems running smoothly and efficiently. DesktopCare includes automatic workstation patch updating, and system SMART checks to check drive space and other base parameters.

How can DesktopCare lower my IT costs?

Proactive service with preventative maintenance for your desktops reduces the chance of downtime and saves your internal IT staff valuable time and labor. DesktopCare frees administrators from the daily burden of maintaining patches, antivirus, and antispyware software, and empowers everyone in your organization with PCs running at maximum efficiency.

What are the benefits?

DesktopCare is a reliable and affordable desktop monitoring solution that includes the following features and benefits:

- **Virus and spyware protection**
DesktopCare includes antivirus and antispyware software, offering constant protection with the latest technology.
- **Preventative maintenance**
Automated desktop and workstation patching, temporary and Internet file cleanup, and SMART checks keep your PCs running smoothly and prevent costly downtime.
- **4-hour alert response time**
ADNET's 4-hour response time, within business hours, ensures that your critical alerts are resolved quickly.
- **Automated Asset Tracking**
Automated Asset Tracking provides you with a complete visible inventory of machines and devices on your network at all times.
