

# ServerVault

## Backup and Disaster Recovery

**ServerVault, ADNET's backup and disaster recovery solution, is a crucial component of professional IT services featuring onsite and offsite backup, secure encryption of your data, and constant monitoring of your backup by our network team.**

### Why ServerVault?

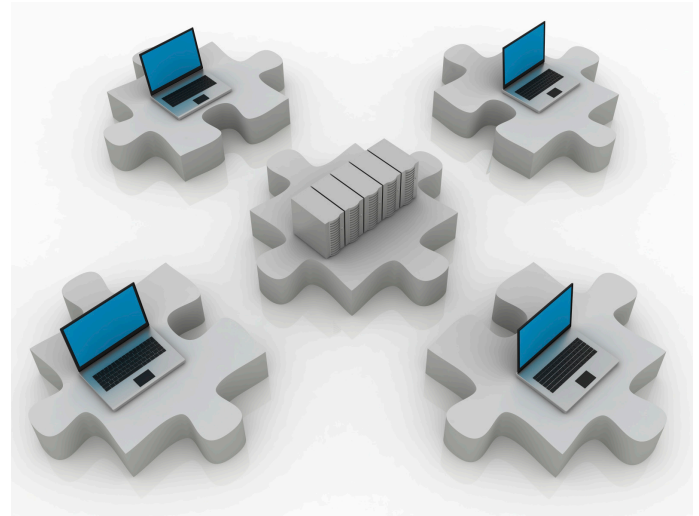

Imagine a scenario in which you discover your backup has failed when you need it the most. Traditional tape backups are costly, error-prone, and lacking in advanced restoration capabilities. With a secure and affordable backup and disaster recovery solution in place, you can stop worrying about the safety of your data and focus more on growing your business.

### How is ServerVault unique?

ServerVault features automatic backup that can occur as frequently as every 15 minutes for the maximum level of protection. Because ServerVault backups are done at block level, they are completed much more quickly and efficiently than traditional backups. In the event of a network issue, ADNET is immediately notified and can work quickly to correct the problem.

### How can ServerVault lower my IT costs?

Our clients have found that ServerVault can actually enhance their budgeting ability and lead to significantly reduced IT costs. ServerVault eliminates the need to depend on costly and unreliable tape backups, and transfers the responsibility of managing the backup from your onsite administrator to ADNET's network team, freeing up your valuable time and labor.

### What are the benefits?

ServerVault is a reliable and affordable backup and disaster recovery solution that includes the following features and benefits:

- **Local and offsite storage**  
Your local storage device holds backup copies and offers an extra level of protection, while your data is also replicated offsite for added security.
- **Secure data encryption**  
Your data is encrypted throughout every step of the backup process, protecting against the data loss that commonly occurs with magnetic tapes.
- **Constant monitoring of your backup**  
Constant monitoring by our network team eliminates the need for an administrator at your site to check it every day, saving you valuable time and labor.
- **Lower long-term support costs**  
Tape backups are costly and unreliable. ServerVault backups are completed much more quickly and efficiently than traditional backups.
