

ServerCare

Server Monitoring Solution

ServerCare, ADNET's server monitoring solution, is a crucial component of professional IT services, featuring 24/7 monitoring and patching to keep your system running smoothly.

Why ServerCare?

When you've got more systems than you can handle, it can be impossible to maintain a clear picture of your network and keep your servers up to date with the latest patches. It only takes one virus to take down an unprotected server, causing network downtime and significant loss of productivity. Managing IT risk takes more than the right technology; it takes a consistent approach to your IT processes in conjunction with your strategic business plan.

How is ServerCare unique?

ServerCare features automated server patching, including Operating System patches and Server Application patches. With your servers and devices under constant watch, the experts on the ADNET team can respond to a critical issue before your users even notice it. ServerCare also includes Automated Asset Tracking, giving you the ability to see a complete visible inventory of machines and devices on your network at all times.

How can ServerCare lower my IT costs?

One of the most powerful features exclusive to ServerCare is ADNET's Recurring Business Review. Included in your subscription, this critical report will be delivered to your key business and technical decision makers annually, detailing your system history over a 12-month period. In addition to offering you greater visibility into your system, this report will provide detailed analysis of system trends, vulnerabilities, and opportunities for growth. By meeting with you to discuss your Recurring Business Review, we can help you to align your technology strategy with your unique business goals.

What are the benefits?

ServerCare is a reliable and affordable server monitoring solution that includes the following features and benefits:

- **24/7 monitoring**
ServerCare features 24/7 monitoring of all servers and up to 5 network devices.
- **1-hour critical alert response**
ADNET's 1-hour critical alert response time includes time outside of normal business hours, ensuring that you never have to wait for resolution in an emergency.
- **4-hour non-critical alert response time**
ADNET's 4-hour non-critical alert response time, within business hours, ensures that your issues get resolved quickly.
- **Automated server patching**
Automated server patching includes Operating System patches and Server Application patches.
- **Recurring Business Review**
This critical report, detailing your system history over a 12-month period, provides detailed analysis of system trends, vulnerabilities, and opportunities for growth.
